CC domain (DED) proteins and nucleic acids encoding them. The invention also comprovides death domain containing protein such as Chlamydia trachomatis comproved death domain containing protein such as Chlamydia trachomatis comproved death domain containing protein such as Chlamydia trachomatis comproved death domain (NIDD) DD and neural growth factor creceptor interacting death domain (NIDD) DD. The invention is useful for cidentifying a binding agent (e.g. protein or drug) that binds a DD, DED cor NB-ARC domain from DAP3, IRAK4, CTDD, DED or NIDD with a candidate composition of the protein or drug) that binds a DD, DED cor NB-ARC domain with protein composition of the DD, DED or NB-ARC domain with protein composition of the DD, DED or NB-ARC domain with protein composition of the DD, DED or NB-ARC domain with protein composition and believed of cell process such as apoptosis, cell adhesion, cell infection and B cell immunoglobulin class switching. DDs, DEDs and NB-ARC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. DD, DED or NB-ARC domain proteins are used to treat infection, allergy, autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte hyperplasia, heloid, benign prostatic hypertrophy, fibrosis, ciflammatory hyperplasia and smooth muscle cell proliferation in arteries of following balloon angiophasty (restenosis). The invention is also used in converse converse converted in the disease of converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse converse co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    153
```

ABL39691 to ABL39818 represent novel human nucleic acid sequences encoding the proteins given in ABB06037 to ABB06164. The novel sequences (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective,

WO200206315-A2

CC (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective,
CC antirheumatic, antiarthritic, antipsoriatic, opthalmological, virucide,
CC antorectic, muscular, anti-HIV, antiinflammatory, dermatological,
CC anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant,
CC anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant,
CC anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant,
CC anticoagulant, gastrointestinal, acuroleptic, cerebroprotective,
CC antidepressant, gastrointestinal, acuroleptic, cerebroprotective,
CC nootropic and contraceptive activities. The NS can be used in vaccines,
CC gene therapy and antisense therapy. Nucleic acids, expression vectors and
CC disgnosling e.g. cancer, osteoporosis, endometriosis, degenerative
CC diseases, dystronia, multiple sclerosis, rheumatoid arthritis, pooriasis,
CC diseases, cosqulation disease, ischaemia, hypertension, asthma, immune
CC disease, epilepsy, angina, neurodegeneration, diabetes, anxiety,
CC depression, schizophrenia, viral disease, gastric ulcers, stroke,
CC Alzheimer's disease and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

                                                                                                                                                                                                                                                                                                           CC which encode human secretory or membrane proteins represented by ABB8317

CC ABB8419. Included in the invention are primers AAP93917 - AAP84295 and

CC AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the

CC invention. The invention also includes methods for the production of

CC antibodies directed against the proteins, and cDNA sequences, which can

CD be used in vaccines. The polymucleotide sequences can be used in gene

CC used in the prevention, treatment and diagnosis of diseases associated

CC with inappropriate secretory protein/membrane proteins they encode may be

CC used in the prevention, treatment and diagnosis of diseases associated

CC with inappropriate secretory protein/membrane protein expression. The

CC used in the presence of similar nucleic acid sequences as DNA probes

CC in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect

CC and quantitate the presence of similar nucleic acid sequences in samples.

CC They may also be used to study the expression and function of secretory

CC proteins/membrane polymeptides and their role in metabolism. The

CC antagonists of expression and activity. The antibodies and antagonists

CC may also be used as therapeutic agents to down regulate expression and

CC antagonists of expression and activity. The antibodies and antagonists

CC may also be used as therapeutic agents to down regulate expression and

CC activity. The antibodies may also be used as diagnostic agents for

CC detecting the presence of the polymeptides in samples (e.g. by enzyme

CC linked immunosorbant assay (ELISA). Examples of diseases which may be

CC treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                              Best Local Similarity

                                                                                                                                                                                                                                                                                              in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as olligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                           Sequence 451 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID NO 28421; 44pp; English

                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH2089-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridiation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations
                                                                                                                                                                                                                    in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence so one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             as hybridization probes, as mapping, in the recombinant antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotide sequences obtained from various cDNA libraries, as hybridization probes, as oligomers for PCR, for chromosome and compping, in the recombinant production of protein, or in generating
                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2003-615964/58.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drmanac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-JUL-2001; 2001US-00918995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-JUL-2001; 2001US-00918995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US2003073623-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human adult ovary cDNA #3436

                                                                                                                                                                                                                                                                                                                                                                                         RESULT 27
                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia. The present sequence represents a PCR primer which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human; death effector domains containing DNA-binding protein; DED-containing DNA-binding protein; DEDD2; cell death; gene therapy; cytostatic; cancer; chronic myeloid leukaemia; PCR primer; ss.

Human ovarian cancer DNA marker #13540.

```
marker corresponds to a secreted protein or to a transcribed CC polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein CC fragment corresponding to the marker. The presence of protein or protein CC fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed CC polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The CC marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient time and comparing the level of expression. The method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, CC polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker to a control marker ovarian cancer. The level of expression of a marker in a control marker ovarian cancer. The level of expression of a marker in a control marker ovarian cancer. The level of expression of a marker in a control marker ovarian cancer. The level of expression of a marker in a control marker ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-MAR-2000;

of developing ovariant cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a CC patient afflicted with ovarian cancer comprising providing to cells of CC the patient an antisense oligonucleotide complementary to a marker of the CC invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the CC marker in a control non-ovarian cancer sample. A difference between the CC expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed CC polynucleotide or its portion. The level of expression of the marker corresponding to the marker. The presence of protein or protein CC ragment corresponding to the marker. The presence of protein or protein CC fragment is detected using an antibody that specifically binds with the protein or protein fragment is assessed by detecting the presence of a transcribed CC polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The patient which involves detecting expression of the marker in a patient compariant issue sample. A composition comprising a marker, cc polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-JUL-2000;
25-JUL-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ovarian cancer; ds; tumour; cytostatic; DNA marker.

                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NTZRM1000558, which contains a death (CC effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (CC comprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can CC regulate apoptosis. The apoptosis-related factor is useful in regulating CC diseases associated with cell proliferation and in screening drug CC candidates e.g., for regulating cell proliferation or cell death in cischaemic diseases and chronic viral diseases. The present sequence crepresents a PCR primer used to amplify CDNA encoding the human apoptosis
                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polynucleotide encoding an apoptosis-associated factor protein with death effector domain and caspase family-cleavage domain, useful in regulating diseases with cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; apoptosis-associated factor; NT2RM1000558; death effector domain; DED; caspase family cleavage domain; pro-apoptotic; drug screening; cell proliferation; ischaemic disease; chronic viral disease; PCR primer

                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NT2RN100558, which contains a death ceffector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells comprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents a PCR primer used to amplify cDNA encoding the human apoptosis
                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method of identifying a compound capable of altering the sensitivity of a microorganism to an antimicrobial agent by employing efflux pumps comprising polypeptides encoded by the following genes: PA1874, PA4142, PA2389, PA1876, PA4143, PA2399 or PA1163. The method is useful for identifying modulators of microbial resistance of an organism in a biofilm. The methods are also useful for identifying genes that encode proteins that play a role in biofilm resistance. The method is particularly useful for screening compounds or discovering compositions that will inhibit biofilm formation and overcome their resistance mechanisms. These methods are particularly useful in medical, industrial or natural settings, where formation of biofilms can have serious negative consequences and result in high costs both in human health and economic terms. The present sequence is a coding/control sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying modulators of microbial resistance of organisms in biofilms, e.g. inhibitor of biofilm formation, by employing expression controls, or efflux pumps containing polypeptides, of genes associated with biofilm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2610

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypoptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypoptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
           Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of Pseudomonas species using biochip technology. Sequences ABD01397. ABD17967 represent P. aeruginosa polymuclaotides of the invention. The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a batterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bush
```

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis a therapy of pathological conditions, as molecular targets for diagnosti prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of

diagnostics

and

aeruginosa

prophytum-bacterial infection, for

Disclosure; pathological

                     The invention relates to a novel isolated polypeptide having a fully defined BAG3 protein sequence of 575 amino acids, 35 amino acids or 67 amino acids and relative fragments having a fully defined amino acid sequence of 15 amino acids as given in the specification. The BAG3 polypeptides have the following activities: vasotropic, antiparkinsonian, neuroprotective, cytostatic, vulnerary, antiulcer, inmunosuppressive, antidiabetic, cardiant, cerebropprotective, and anti-HIV. The BAG3 polypeptides and fragments; the encoding nucleic acids, complements and their fragments; and aBAG3 carrier are useful for modulating apoptosis in primary cells and treating diseases chosen from acute or chronic tissue damages, such as heart, kidney, brain or other organ ischaemia, HIV-related damage of brain or other tissues, skeletal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-ABD17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated BAG3 protein, useful for treating Parkinson's disease, amyotrophic lateral sclerosis, skeletal muscle disorders, tissue repair or wound healing, and treatment of surgical incisions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 10; 42pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       នៃនៃនៃនិ≷ଝ
This invention is related to a novel isolated canine nucleic acid CC sequences and the construction of canine microarrays containing a CC significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the conjugate, including toxicity, of a compound, pharmaceutical agent or convironmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines in a disease state. The sequences are useful as diagnostic agents or markers to detect a cellular response in a sample individually or as part of a gene expression profile. It is also useful as a target for agents that modulate gene expression or activity. The database is useful for producing electronic Northerns that allow the user to determine the cell type or tissue in which a given gene is expressed and to allow determination of the abundance or expression level of a given gene in a call of the control of the abundance or expression level of a given gene in a call of the control of the abundance or expression level of a given gene in a call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the call of the ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorders such as Parkinson's disease, amyotrophic lateral sclerosis and others, and neoplastic, autoimmune and other diseases involving excessive or defective apoptosis, tissue repair or wound healing, treatment of surgical incisions, and ulcers, such as stomach or diabetic ulcers. This polynucleotide sequence represents the DNA partially encoding the 35 amino acid human BAG3 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           similarity of a toxic response to one or more individual compounds. The methods are useful for predicting at least one toxic response or the likelihood that a compound or test agent will induce various specific pathologies such as those of the liver (liver necrosis, fatty liver disease, protein adduct formation or hepatitis), those of the kidney, heart, brain or testes, or other pathologies associated with at least one of the toxins. The methods are also useful for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the production of a canine microarray of the invention.
                                                                                                  AM452093 to AAH52303 encode the human secreted proteins given in AAG81242 to AAG81453. The secreted proteins can be used for directing the secretion of proteins of interest from a host cell including bacteria, fungal cells, and cultured higher eukaryotic cells. The present invention also describes fusion proteins, where a secreted protein of the invention is operably linked via a peptide bond or peptide linker to a second protein selected from the group consisting of maltose binding protein, an immunoglobulin constant region, a polyhistidine tag and a peptide given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; secretion; bacterial cell; fungal cell; eukaryotic cell; fusion protein; maltose binding protein; immunoglobulin constant region; polyhistidine tag; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated polypeptide for directing secretion of proteins of intea a host cell including, e.g. bacteria, includes contiguous amino residues of polypeptide with specified amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human

                                                                                                                                                                                                                                                                                                                                                       Baker KP,
Gurney AL,
This invention relates to the cDNA and protein sequences of novel secreted and transmembrane polypeptides PRO polypeptides. The invention also comprises a method for producing the proteins of the invention by recombinant means and antibodies specific for the protein of the invention. The antibody may be used for detecting the PRO proteins of the
                                                                                                                                                                         New PRO polypeptides and polynucleotides encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, o genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                  Gurney !

The PRO polypeptides are useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in cancerous tumours and for screening for differentially expressed genes using microarray technology. The present sequence represents a cDNA encoding a human PRO protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention and may be used to modify their activity. polynucleotides may be used as hybridisation probes for a cDNA library to isolate the full-length PRO cDNA or to isolate other CDNAs, to construct hybridisation probes for mapping the gene which encodes that PRO and for genetic analysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knock-out animals which in turn are useful in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC transmembrane polypeptides) and the polynucleotides encoding them. The CC invention also relates to an antibody which specifically binds to a PRO CC polypeptide, a method for stimulating the release of tumour necrosis CC factor-alpha (TMF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, CC colon, breast, prostate, rectal, cervical and liver tumours). The CC polynucleotides are useful in molecular biology, including uses as CC polynucleotides are useful in molecular biology, in generating and in probes, in chromosome and gene mapping, in generating CC antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in CC generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful creagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or contibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cell tube formation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and remunatod arthritis. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC a sequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given CC in specification, or a sequence having at least 80% identity to PRO CC lacking its associated signal peptide, an extracellular domain of PRO CC transformed host cells, anti-PRO antibodies, the nucleic acids encoding CC PRO, PRO fusion proteins, inducing endothelial cell tube formation (by CC administering PRO281, PRO1560, PRO189, PRO4499, PRO6308, PRO6000, CC PRO10275, PRO202031 or PRO2749 polypeptide or its agonist) and CC and injouncleotide polypeptide is useful for stimulating the proceeding CC proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 CC proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 CC proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 CC proliferation or conscrutar endothelial cells. PRO6071, PRO4487 and PRO6006 CC propeptides are useful for inhibiting the proliferation of human microvascular endothelial cells. PRO polypeptides are useful for processor of tumours of lung, CC colon, breast, prostate, rectal, kidney and liver. PRO281, PRO1550, CC pRO189, PRO4499, PRO6000, PRO60077, PRO202033 and CC promation. PRO or the antibody are useful in the preparation of a condicament for treating a condition responsive to PRO polypeptide. The CC medicament for treating a condition responsive to PRO polypeptide. The CC microscome and as antisense probes. PRO mucleic acid is useful as a CC hybridisation probe, in chromosome and gene mapping, in the generation of an creating endothesial call tubes. PRO antisense RNA and DNA, and for the preparation PRO polypeptides. PRO and CC present sequence encodes a PRO protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                          Zhang
                                                                                                                                                                                                                                                                                           2
```

CC polypeptide, having at least 80% sequence identity to a sequence selected from any one of the 57 amino acid sequences given in specification, or to casequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given in specification, or a sequence having at least 80% identity to PRO consisted its associated signal peptide. Also included are vectors, with or without its associated signal peptide. Also included are vectors, consisted host cells, anti-PRO antibodies, the nucleic acids encoding CC PRO, PRO fusion proteins, inducing endothelial cell tube formation (by administering PRO281, PRO1560, PRO189, PRO4499, PRO6300, PRO6000, PRO 200333 or PRO34274 polypeptide or its agonist) and consisted probe derived from any one of the above nucleotide sequences. PRO6018 polypeptide is useful for stimulating the proliferation of chondrocyte cells, PRO1313, PRO20080 consisted are useful for stimulating the proliferation of chuman microvascular endothelial cells. PRO6071, PRO4497 and PRO6006 colon, breast, prostate, rectal, kidney and liver. PRO281, PRO1303, PRO6000, PRO189, PRO64499, PRO6000, PRO10275, PRO21207, PRO2933 and CC colon, breast, prostate, rectal, kidney and liver. PRO281, PRO1500, PRO33274 polypeptides are useful for inducing endothelial cell tube formation. PRO or the antibody are useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide. The collectide probes are useful for isolating genomic and cDNA collectide probes are useful for isolating seminated and cDNA collectide probes are useful for isolating seminate and cDNA collectide probes are useful for isolating genomic and cDNA collectide probes are useful for isolating genomic and cDNA collectide probes are useful for isolating genomic and cDNA collectide probes are useful for isolating genomic and cDNA collectide probes are useful for isolating genomic and cDNA collectide probes are useful for associated and cDNA collectides are useful f hybridisation probe, in chromosome and gene mapping, in the generation antisense RNA and DNA, and for the preparation PRO polypeptides. PRO and PRO nucleic acid are useful as therapeutic agents, e.g. vaccines. The present sequence encodes a PRO protein. seful as a seration of . PRO and

                                                                                                                                                                                                                                                           र्
                                                                                                                                                                                                                                                                                                                                                                                                             CC transmembrane polypeptides) and the polymucleotides encoding them. The CC invention also relates to an antibody which specifically binds to a PRO CC polypeptide, a method for stimulating the release of tumour necrosis CC factor-alpha (TNF-alpha) from human blood, a method for stimulating the CC factor-alpha (TNF-alpha) from human blood, a method for stimulating the CC proliferation or differentiation of chondrocyte cells and a method for CC detecting the presence of a tumour in a mammal (e.g. lung, colon, breast, CC prostate, rectal, kidney and liver tumours). The polymucleotides are cuseful in molecular biology, including uses as hybridisation probes, in CC chromosome and gene mapping, in generating antisense RNA and DNA and in CC chromosome and gene mapping, in generating antisense RNA and DNA and in CC chromosome and gene mapping, in generating and in generating PRO CC polypeptides by recombinant techniques and in generating either CC transgenic animals or knock-out animals which are useful in the CC golypeptides or antibodies are used in preparing a medicament for CC transgenic and streening of therapeutically useful respents. The PRO CC polypeptides or antibodies are used in preparing a medicament for CC transgenic acondition responsive to the polypeptides or antibodies, such CC setuponers and condition responsive to the polypeptides or antibodies, such CC condition. This sequence represents a human PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                 Query Match

CC polypeptide, having at least 80% sequence identity to a sequence selected from any one of the 57 amino acid sequences given in specification, or to care sequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given consisted in specification, or a sequence having at least 80% identity to PRO careful its associated signal peptide, an extracellular domain of PRO careful proteins, inducing endothelial cell tube formation (by cadministering pRO2181, PRO1560, PRO189, PRO499, PRO5008, PRO6000, procession proteins, inducing endothelial cell tube formation (by cadministering pRO21277, PRO20933 or PRO34274 polypeptide or its agonist) and can oligonuclectide probe derived from any one of the above nucleotide sequences. PRO6018 polypeptide is useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 can oligonuclescular endothelial cells. PRO6017 procession of human microvascular endothelial cells. PRO6017 procession of human microvascular endothelial cells. PRO6017 procession of human compassion are useful for inhibiting the proliferation of human compassion prostate, rectal, kidney and liver. PRO2181, PRO1560, cells. PRO60189, PRO60199, PRO60309, PRO6000, PRO16075, PRO21807, PRO20933 and cells. PRO60199, PRO60199, PRO6000, PRO16075, PRO21807, PRO20933 and cells. RESULT 44
ADA43692
ID ADA43
        The invention relates to an isolated secreted/transmembrane (PRO)
CC polypeptide, having at least 80% sequence identity to a sequence selected
CC from any one of the 57 amino acid sequences given in specification, or to
CC a sequence encoded by a nucleic acid molecule selected from any one of
CC the nucleic acids deposited under any of the ATCC accession numbers given
CC in specification, or a sequence having at least 80% identity to PRO
CC lacking its associated signal peptide, an extracellular domain of PRO
CC with or without its associated signal peptide. Also included are vectors,
CC with or without its associated signal peptide. Also included are vectors,
CC pRO, PRO fusion proteins, inducing endothelial cell tube formation (by
CC administering PRO281, PRO1963, PRO189, PRO499, PRO6308, PRO6000,
CC PRO10275, PRO21207, PRO20933 or PRO34274 polypeptide or its agonist) and
CC an oligonucleotide probe derived from any one of the above nucleotide
CC sequences. PRO6018 polypeptide is useful for stimulating the
CC proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080
CC and PRO21333 polypeptides are useful for stimulating the proliferation of
CC numan microvascular endothelial cells. PRO 6071, PRO487 and PRO6006
CC polypeptides are useful for inhibiting the proliferation of human
CC microvascular endothelial cells. PRO polypeptides are useful for
CC detecting the presence of tumour in a mammal, including tumours of lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-JUL-1998; 98US-0091358P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             colon, breast, prostate, rectal, kidney and liver. PRO281, PRO1560, PRO189, PRO4499, PRO6300, PRO6000, PRO10275, PRO21207, PRO20933 and PRO34274 polypeptides are useful for inducing endothelial cell tube formation. PRO or the antibody are useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences, for measuring or detecting the expression of an associated gene, and as antisense probes. PRO nucleic acid is useful as a hybridisation probe, in chromosome and gene mapping, in the generation of antisense RNA and for the preparation PRO polypeptides. PRO and PRO nucleic acid are useful as therapeutic agents, e.g. vaccines. The present sequence encodes a PRO protein.

The polynucleotides may also CC be used in preparing PRO polypeptides by recombinant techniques and in CC generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful CC reagents. The PRO polypeptides or antibodies are used in preparing a CC medicament for treating a condition responsive to the polypeptides or CC antibodies, such as tumours, for stimulating and inhibiting proliferation CC of human microvascular endothelial cells, for inducing endothelial cell CC tube formation and for treating various bone and/or cartilage disorders can be sports injuries and arthritis. PRO polypeptides which stimulate CC the release of proteoglycams from cartilage and for treating CC sports-related joint problems, articular cartilage defects can be seen and a condition associated disorders such as conditions the lassesmiss and conditions which may be a condition as a condition as a condition as which are also useful constituted that the condition are also conditions to the casting various mammalian haemoglobin-associated disorders such as conditions that are and conditions which may be considered the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC polypeptide (I) PROGOIS polypeptide is useful for stimulating the polypeptide is useful for stimulating the cor PROJISS polypeptide is useful for stimulating the proliferation of differentiation of chondrocyte cells. PROJIS, PRO2008, CC or PROJISS polypeptide is useful for stimulating the proliferation of numan microvascular endothelial cells. PRO6071, PRO4487, or PRO6006 polypeptide is useful for timibiting the proliferation of numan microvascular endothelial cells. PRO profite at the proliferation of human control sample of cells taken from the microvascular endothelial cells. PRO polypeptides such as PRO240, PRO256, CC PRO608, PRO1002, PRO416, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the sample of cells taken from the tumour in a mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptide in the test sample as the mammal, the tumour being adrenal tumour, propertide in the test sample as the mammal, the tumour being adrenal tumour, cervical tumour, colon tumour, compared to the control sample is indicative of the presence of tumour in the mammal, the function sample is indicative of the presence of tumour or liver to be the propertide is useful for treating sports-related joint the mammal, prostate tumour, rectal tumour, cervical tumour or liver tumour. PRO6018 polypeptides is useful for treating sports-related joint or protein electrophoresis. (I) is also useful for screening compounds to identify those that mind the PRO polypeptide (agonists) or prevent the fefect of the PRO polypeptide (agonists) or prevent the ceffect of the PRO polypeptide (agonists) or prevent the full-ength process for a count of PRO polypeptides. The full-ength PRO count of the propertions may be used as count of process for anything the properties of may be used as the properties of the properties of individuals which in the development and screening of therapeutically useful reagents. (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Baker KP,

The invention relates to isolated human PRO polypeptides (secreted and cransmembrane polypeptides) and the polypucleotides encoding them. The circumstance of invention also relates to an antibody which specifically binds to a PRO CC polypeptide, a method for stimulating the release of tumour necrosis CC factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for CC detecting the presence of a tumour in a mammal (e.g. adrenal, lung, CC colon, breast, prostate, rectal, cervical and liver tumours). The CC polypucleotides are useful in molecular biology, including uses as CC hybridisation probes, in chromosome and gene mapping, in generating CC antisense RNA and DNA and in gene therapy. The polypucleotides may also CC be used in preparing PRO polypeptides by recombinant techniques and in CC generating either transgenic animals or knock-out animals which are CC useful in the development and screening of therapeutically useful creagents. The PRO polypeptides or antibodies are used in preparing a CC medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cell cube formation and for treating sports-related joint problems, articular corrected of the properties. This sequence cartilage defects, osteoarthritis and rheumatoid arthritis. This sequence

                                                                                                                                                                 The invention relates to isolated human PRO polypeptides (secreted and CC transmembrane polypeptides) and the polymucleotides encoding them. The CC invention also relates to an antibody which specifically binds to a PRO CC polypeptide, a method for stimulating the release of tumour necrosis CC factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, CC colon, breast, prostate, rectal, cervical and liver tumours). The CC polymucleotides are useful in molecular biology, including uses as CC hybridisation probes, in chromosome and gene mapping, in generating CC antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in CC generating either transgenic animals or knock-out animals which are CC useful in the development and screening of therapeutically useful CC medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation CC of human microvascular endothelial cells, for inducing endothelial cell Ctube formation and for treating sporte-related joint problems, articular cartilage defects, osceoarthritis and rheumatoid arthritis. This sequence crepresents a human PRO polynucleotide of the invention.
                                                                     Matches
                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; gene; ss; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TWF-alpha; blood; chondrocyte cell; tumour; adrenal; lung; colon; breast; prostate; rectum; cervix; liver; cancer; microvascular endothelial cell; endothelial cell tube formation; sports-related joint problem; articular cartilage defect; osteoarthritis; rheumatoid arthritis; osteopathic; antirheumatic; antiarthritic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for diagnosing, preventing and/or treating tumors, such lung, colon, breast, prostate, rectal, kidney or liver tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Baker KP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human PRO polynucleotide #56.

cc with or without its associated signal peptide. Also included are vectors, cc transformed host cells, anti-PRO antibodies, the nucleic acids encoding C PRO, PRO fusion proteins, inducing endothelial cell tube formation (by CC administering PRO281, PRO1560, PRO189, PRO4499, PRO6308) PRO6000, CC PRO10275, PRO21207, PRO20933 or PRO34274 polypeptide or its agonist) and an oligonucleotide probe derived from any one of the above nucleotide sequences. PRO6018 polypeptide is useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 and PRO21383 polypeptides are useful for stimulating the proliferation of human microvascular endothelial cells. PRO6011, PRO3487 and PRO20080 cc polypeptides are useful for inhibiting the proliferation of fundament controvascular endothelial cells. PRO6001, PRO3487 and PRO20080 cc polypeptides are useful for inhibiting the proliferation of fundament controvascular endothelial cells. PRO polypeptides are useful for detecting the presence of tumour in a mammal, including tumours of lung, colon, breast, prostate, rectal, kidney and liver. PRO2813 and PRO1860, PRO34274 polypeptides are useful for inducing endothelial cell tube (formation. PRO or the antibody are useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide. The colligonucleotide sequences, for measuring or detecting the expression of an associated gene, and as antisense probes. PRO oucleic acid is useful as a hybridisation probe, in chromosome and gene mapping, in the generation of antisense probes. PRO polypeptides. PRO and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-FEB-2001;

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in
                                                                                                                                                                                                          New isolated secreted and transmembrane PRO polypeptides, e.g. PRO20080 or PRO21383, useful in stimulating the proliferation or differentiation of chondrocyte cells and detecting the presence of a tumor in a mammal.
                                                                                                                                                                                                                                                                                                            Fong

generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cell tube formation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. This sequence represents a human PRO polynucleotide of the invention.
